

LifeOps

Your AI-Powered Personal Operating System

Most apps ask: *"Did you finish the task?"*

LifeOps asks:

"Is today helping you become the person you want to be?"

The Problem

Productivity apps treat your life as isolated systems

Habit Tracker

Measures streaks —
not goals

Task App

Flat lists — no identity
link

Notes App

Passive storage — no
action

Goal Planner

Collects dust after
week 1

AI Assistant

Generic advice — no
context

None of these apps talk to each other. Lots of activity. Zero alignment.

The Insight

What if your daily actions were explicitly connected to the person you're becoming?

🔄 Closed loop — every layer feeds the next

"Start with identity. Work backwards to today."

Core Modules

Everything connected in one calm dashboard

Future Self

Define your identity

Goals

Linked to life areas

Habits

Built from your goals

Tasks

Prioritised & linked

Notes

Capture + AI actions

Dashboard

Everything in view

AI Planner

Review-before-save

Weekly Review

Wins, gaps, patterns

AI That's Actually Different

Generic AI chatbots

- ✗ No context about who you are
- ✗ Generic time management tips
- ✗ No link to your actual goals
- ✗ Advice that ignores your habits

LifeOps AI

- ✓ Uses YOUR Future Self profile
- ✓ Uses YOUR active goals as context
- ✓ Generates YOUR daily plan
- ✓ Review-before-save — you stay in control

"The AI surfaces. The human decides."

Tech Stack

Production-grade, modern, open source

Frontend

- Next.js App Router
- React + TypeScript
- Tailwind CSS

Backend

- Server Actions
- PostgreSQL + Prisma
- NextAuth + Zod

AI Providers

- OpenAI
- Anthropic
- Groq — switchable at runtime

DevOps

- Docker Compose
- pnpm workspaces
- Turbo monorepo

All AI calls are server-side only. No API keys on the client. Ever.

Design Philosophy

Calm, not noisy

No red streaks. No anxiety badges. LifeOps feels like a quiet workspace, not a dashboard screaming at you.

Guided, not overwhelming

Opinionated about what matters — the Future Self loop — so you're never staring at a blank canvas.

Becoming, not completing

The question isn't whether you ticked the box. It's whether the day moved you closer to who you want to be.

Honest about progress

The weekly review shows real wins and real gaps — not inflated streaks or fake productivity scores.

Who LifeOps Is For

The Productive but Unaligned

Always busy. Occasionally stops to ask: is all this activity actually taking me somewhere?

The Multi-App Juggler

Uses 4-5 tools that don't talk to each other. Wants one system that sees the whole picture.

The Self-Improvement Seeker

Into identity-based habits, future self journaling, life design — but wants structure, not a blank journal.

The Developer / Builder

Wants to self-host, fork, and extend. Appreciates clean architecture and an open source codebase.

Roadmap

Phase 1 — MVP

Live

- Future Self profile
- Goals + Life Areas
- Habits + Tasks
- Notes + AI summarise
- Dashboard
- AI Daily Planner
- Weekly Review
- Admin AI settings

Phase 2 — Growth

Planned

- Mobile app (React Native)
- Integrations (Calendar, Notion)
- Deeper automation
- Progress analytics
- Public profile sharing

Phase 3 — Community

Future

- Shared habit templates
- Accountability partners
- Community challenges
- API for third-party apps
- White-label / enterprise

Open Source. MIT License.

Self-host it. Fork it. Extend it. Contribute.
